Decred On-chain Analytics

An overview of what Hybrid PoW/PoS consensus looks like on-chain

By Checkmate

decred

Decred On-chain

The Decred chain has a very different ‘HODLer’ signature on-chain to that of Bitcoin.

For Bitcoin, high conviction HODLing shows up as a **single withdrawal transaction** followed a period of dormancy.

For Decred, the hybrid PoW/PoS consensus ticket system mean high conviction HODLing has coins moving

Decred On-chain

On-chain Analysis is about dissecting the **Psychology and Behaviour** behind network transactions.

Example actions related to Decred:

Action	Psychology	Signals
Ticket Purchase	Strong Desire to Hold	**Bullish**
Increasing Tx Volume	Demand for Blockspace	**Bullish**
Price Below Subsidy Income	Network Income Stress	**Bearish**
Difficulty Squeeze	Miner Income Stress	**Bearish**

decred

Realised Price and MVRV Ratio

decred

Decred MVRV Ratio Valuation

Psychology: Ticket Demand as a measure of Cost Basis, Support in Bull, Resistance in Bear

Summary

The Decred blockchain has a unique blend of:

- **Machine Consensus** in Proof-of-Work
- **Human Consensus** in Proof-of-Stake

Holding DCR and participation in governance via tickets is a very high conviction signal of Network Sentiment.

Cost Basis models provides insight into the economic stress or euphoria for various stakeholder and participants.
