Decred On-chain Analytics

An overview of what Hybrid PoW/PoS consensus looks like on-chain

decred

Decred On-chain

The Decred chain has a distinct set of on-chain signatures for network participants to that of Bitcoin.

For Bitcoin, high conviction HODLing shows up as a **single withdrawal transaction** followed a period of dormancy.

For Decred, the hybrid PoW/PoS consensus ticket system mean **high conviction HODLing** has coins moving often.

decred

Decred On-chain

On-chain Analysis is about dissecting the **Psychology and Behaviour** behind various network transaction patterns.

Examples related to Decred:

Action	Psychology	Signals
Ticket Purchase	Strong Desire to Hold	**Bullish**
Increasing Tx Volume	Demand for Blockspace	**Bullish**
Price Below Subsidy Income	Network Income Stress	**Bearish**
Difficulty Squeeze	Miner Income Stress	**Bearish**

decred

Summary

The Decred blockchain has a unique blend of:

- **Machine Consensus** in Proof-of-Work
- **Human Consensus** in Proof-of-Stake

Holding DCR and participation in governance via tickets is a very high conviction signal of Network Sentiment.

Cost Basis models provides insight into the economic stress or euphoria for various stakeholder and participants.

decred

Summary

Great value and importance is placed on **Good Governance** by the Decred DAO.

On-chain analysis provides data, tools and insights to network health upon which stakeholders can base decisions.

Impressively, the Decred DAO has bootstrapped itself entirely by its own Treasury ensuring self-sovereignty and longevity.
